

Safety Stations

Description:

Safety Stations are designed to dispense P.P.E. (Personal Protection Equipment) eg : Safety Vests, Safety Glasses, Earplugs, Batteries, First Aid (eye wash etc). Safety Stations can be sited in convenient locations throughout the workplace, thus providing 24/7 access to P.P.E.

Employees can access P.P.E. with a safety card which is issued by their employer. Every Safety Station is fitted with a card reader. To access a product the card is inserted into the reader which is located on the front panel. When a selection is made the card reader records the safety station number, time and date, employee name and I.O. number and a description of the product dispensed.

Safety Stations are available in various sizes and models. A typical Safety Station would have 50 selections for P.P.E. products. Each selection (depending on product size) would have 10 to 20 products available.
